

# SafeLine **EVAC**

99 floors –  
**one** evacuation  
system

# 219 145 hours later...

SafeLine celebrates 25 years of supplying independent lift safety. Although a lot has happened in these years - we've only just begun and the SafeLine Family is growing more than ever. To all of you installers, consultants and distributors who have made lift safety a priority - thank you for letting us do what we do best.

If it's true it takes 10 000 hours to really master something... we like to think we know what we're doing.

**25** 1995-2020

# SafeLine EVAC

## - evacuation and firefighting system for lifts

SafeLine's complete state-of-the-art evacuation and fire intercom communication system for up to 99 floors - providing the safety required by European safety regulations for a building. An intelligent and highly installation-friendly system with a timeless and intuitive design.

### The alarm is activated in the building - how do you evacuate people?

During an emergency, lifts normally return to the ground floor and will be out of service until the emergency situation is over. Those who are not able to walk down the stairs will be stuck within the building on different floors. How can you tell if the building is fully evacuated or not? Are there still people left on the floors or in the lift lobbies?

With an EVAC intercom system, the distressed and the building's staff are able to communicate by using the intercom stations in the system. On the entrance station's intuitive display, staff can easily see on which floors there are people in need of evacuation and then, with the help of the keypad, choose which station they want to communicate with. The EVAC's distinct design in stainless-steel blends into most buildings, and its functions give an intuitive and comprehensible impression - features that can potentially be life-saving in a stress-filled emergency.

SafeLine EVAC meets the strict demands of the European lift standard for fire: EN81-72, and the British building standard for evacuation: BS 9999:2008.

## A safe choice of fire communication - living up to the European lift standards in fire safety

- Can handle any building up to 99 floors
- Activate system through fireman switch
- Unique floor identities
- Automatic self-checks of floor stations
- 230 VAC supply to main unit
- Intuitive user interface
- Communication for the whole lift system
- Short installation time with little intrusions

## Your partner in lift safety

SafeLine is a Swedish lift safety company founded in 1995. We have provided our clients with over 300 000 installations of lift safety products manufactured in Tyresö, Sweden - making us the largest independent producer of lift safety products in Europe.
